WORK EXPERIENCE

Open-source Intern - Quansight Labs

July 2026 - October 2026

Developing a Sphinx extension (WIP - [Code](#)) to enable phase-wise profiling and benchmarking of [Sphinx](#) documentation builds. Leveraging these benchmarking results to extrapolate performance trends, identify bottlenecks, and contribute optimizations within the Sphinx ecosystem.

Independent Contractor - NumFOCUS ([Scikit-image](#))

November 2024 - March 2025

Contributed towards incorporating an 'entry-point' based API dispatching mechanism in scikit-image. Experimented with different approaches; collected feedback from scikit-image and [cuCIM](#) developers to improve the machinery and the user-API; coordinated and collaborated with developers from various Scientific Python open-source projects; contributed towards supporting other general activities in scikit-image. Checkout the [final report](#) to know more!

Contributor - Google Summer of Code (NumFOCUS)

May 2024 - August 2024

Integrated [NetworkX](#)'s and [joblib](#)'s configuration systems into [nx-parallel](#), switched the build tool from hatchling to setuptools, automated backend metadata updation through a pre-commit hook, improved and provided custom chunking capabilities for all existing algorithms. Beyond the proposed items, created a conda-forge feedstock for nx-parallel, started discussions on the future directions nx-parallel could go and accomplished various other enhancement and maintenance goals. ([Final report](#) and [Bi-weekly blogs](#))

Independent Contractor - NumFOCUS ([NetworkX](#))

Jan 2024 - Mar 2024

Developed on [nx-parallel](#), a newly added parallel backend for NetworkX utilizing [joblib](#) to parallelize graph algorithms; set up the [asv benchmarks](#); analyzed the effects of chunking on speedups; added 15 parallel graph algorithms; integrated the 'entry-point' that exports backend metadata to networkx. [Know more!](#)

Skills/Tools learned: Python (API dispatching, Python package management, [joblib](#) (parallel algos), [NetworkX](#) (graph algos), [scikit-image](#) (image analysis), [pytest](#) (testing)), [ASV](#) (for benchmarking), GitHub (CI/CD), maintaining large OSS and community.

ACTIVITIES AND VOLUNTEER ROLES

- Maintainer/Core Developer - [NetworkX](#), [Scientific Python](#), [Conda Forge](#) (feedstock maintainer)
- Google Summer of Code 2025 Mentor (NumFOCUS - NetworkX) [May 2025 - Aug 2025] [[Link](#)]
- Presented talks, posters, sprints at EuroSciPy, SciPy US, PyCon India, PyData Global, PyHEP [[Archive](#)]
- Communities and conferences: [SciPy India](#) (organizer), SciPy 2025 ([proceedings paper reviewer](#)), IndiaFOSS 2025 ("FOSS in Science" [devroom manager](#)), [DISC Unconference 2025](#), PyData Global 2024 and [PyDelhi](#) (reviewer), PyCon US 2025 (mentor)
- All India Rank 686 (out of 39,210 candidates) in [GATE\(Data Science and AI\)](#) 2024
- Expository writings - [Kruskal's algorithm-blog](#), [Math food play](#), [LCG and Randomness](#) and [more!](#)
- Workshops/courses - HSF-India workshop, Deep Learning(Top 5%), Social Networks(Top 1%) (Certificates on [LinkedIn](#))

PROJECTS

E-commerce Website

[[Code](#)]

A Flask-based e-commerce web app, featuring CRUD APIs, RBAC authentication. Features like order placement, inventory management, scheduled tasks (emailing reminders/reports), product recommendations, and other diverse functionalities for the 5 user types.

Tools/libraries used: Python, Flask, flask-restx, Docker, SQLite(RDBMS), sklearn, Celery, HTML, flask-mail, Github, shell scripting, Stripe (online payments API), Twilio (message sending API), Swagger

EDUCATION

Indian Institute of Technology, Madras

BS in Data Science and Application

2021 - May 2026 (dropped-out)

University of Delhi

Bachelor of Science (Honors) Computer Science

2021 - 2024
